

# Telwater (formerly Quintrex)

## Roof repairs and maintenance

Telwater is Australia's largest manufacturer of aluminium boat and trailer packages in the southern hemisphere. Australian owned and operated, Telwater produces up to 30 boats per day and is supported by approximately 200 dedicated staff.

 Coomera, Queensland  
 Construction

### Project scope

Wiley worked collaboratively with Quintrex to successfully build their industrial facility at Coomera. Due to the successful partnership on that project, Telwater engaged Wiley to deliver an innovative roofing system many years later.

Wiley undertook urgent roof repairs and maintenance over four days, with an urgent turn around required. The project involved:

- Remove and replace all Alsynite sheeting to ensure structural integrity
- Remove and replace damaged roof sheeting to prevent future issues
- Replace all roof screws to ensure watertight protection
- Upgrade box gutters with stainless steel, enhancing durability and functionality
- Power wire breezeway louvers to eliminate rust, as the facility is in close proximity to the Gold Coast waterways
- Remove loose paint, then recoat in a 2 Pack paint system insitu to improve aesthetics
- Wash down entire roof area

### Business value to client

Wiley partnered with Telwater to enhance their facility and proactively protect their valuable assets from the harsh Australian climate.

By undertaking crucial upgrades, we ensured Telwater's operations could continue seamlessly—without any loss of trade or production. This was essential not only for their business continuity but also for maintaining the quality and reliability they're known for.
