

Sunny Queen

New processing and distribution facility, chiller and freezer extension

Sunny Queen is 100% owned by Australian farmers, Sunny Queen are a leader in providing fresh, quality eggs to the Australian market daily.

-  Carole Park, Queensland
-  Design, value engineering and construction

Project scope

Wiley was engaged to deliver a 5,700m² greenfield facility, after winning the contract from a select group of six tenderers.

Following a thorough and collaborative Discover phase, Wiley was charged with the design of the structural elements. Wiley took an active role in monitoring the design, to identify further cost savings and creating value for Sunny Queen throughout the project.

Wiley was also commissioned to oversee the integration of the value-engineered proposals into the construction documents to help control project costs.

The project included:

- A value-added egg processing facility
- Low and high hygiene production areas
- Facilities for cooking, chilling and freezing
- Product warehouse facility for distribution
- Chilled warehouse for processed egg product
- Distribution facilities for the client's overall operation
- Six cold chain compliant load out docks and staging area

Business value to client

Sunny Queen Australia is looking to the future with their new, world-class processing facility, producing a range of ready-to-eat egg products.

The Carole Park location is now their primary production hub, with smart investments in innovative, future-focussed food facilities.

Key to the success of their project was close collaboration with a food industry experienced design and construction company. Wiley provided value-adding to design and through the construction detailing phase, resulting in cost savings for the client.

Selection of the right project partner ensured the smooth integration of their food manufacturing, storage and distribution operations.

This new facility allows Sunny Queen to lead the way in meeting ever-increasing food demands in Australia, Asia and globally.
